ECS 40   **Software Development and Object-Oriented Programming Syllabus**   **Spring 2016**

Name	Title	E-mail	Office Hours
Sean Davis	Lecturer	ssdavis@ucdavis.edu	MWF 10-11:30 in 71, 75, or 3052 Kemper; MW 1:15-4 in 3052 Kemper; and by appointment.
Yuangguang Liao	TA	ygliao@ucdavis.edu	T 7-10, W 2-4 in 53 Kemper
(Jason) Yu-Cheng Lin	TA	ycjlin@ucdavis.edu	M 4-6, T 6:30-10:30, W 3:30-6:30 in 53 Kemper
Yingying Wang	TA	yiwang@ucdavis.edu	M 6-midnight in 53 Kemper
Robert Morning	TA	rdmorning@ucdavis.edu	T 2-5, W 4-6 in 53 Kemper

Web page: http://csiflabs.cs.ucdavis.edu/~ssdavis/40/homepage.html
Newsgroup: https://piazza.com/ucdavis/spring2016/ecs40/home

E-mail to Sean should only be regarding personal matters, and must come from an ucdavis.edu e-mail account. All course
    questions should be posted piazza.

Course Materials:
Shotts, William E., Jr., The Linux Command Line: a Complete Introduction, San Francisco: No Starch Press, 2012.
    ISBN-13: 978-1-59327-389-7
Lippman, Stanley B.; Lajoie, Josee; Moo, Barbara E., C++ Primer, 5th ed., San Francisco: Addison Wesley, 2013.
    ISBN-13: 978-0-321-71411-4

Prerequisite: Course ECS 30 with a grade of C- or better.

Course objectives:
1. Become more familiar with software development tools such as gdb and make to further refine the programming techniques of stepwise refinement, documentation, multi-file program design, and time/storage tradeoffs.
2. Understand the UNIX OS including its processes, file system, system files, and shells.
3. Understand pointers, recursion, file manipulation, and simple data structures such as stacks, queues, and lists.
4. Learn object-oriented design and implementation of C++, including polymorphism, operator overloading, encapsulation, and inheritance.

Approximate Course Grading:
    Homework and tutorials 5%
    Programs   35%
    Two midterms   27.5% (12.5% & 15%)
    Final   32.5%
    Class effort/participation   5% (extra credit)

    Letter grades will be approximately: A = 90+%; B = 80-89%; C = 70-79%; D = 60-69%; F = <60%

Work Input/Output:
- Written Homework: Each student must do his or her own work. Written homework must be submitted at the beginning of class on the date due.
- Programs: Students should work together in groups of two people. The names and e-mail addresses of all group members must appear in a file named authors.csv. All students may help each other with debugging, but each group must write their own code. Programs will be submitted using the handin facility of UNIX to the cs40a account by midnight on the date due. Each group should submit all of its programs to the handin directory of exactly one of its members. Programs that do not compile will receive no credit. Certain assignments may be submitted to the MOSS program at UC Berkeley for plagiarism analysis. Students that hand in suspicious programs may be reported to Student Judicial Affairs. Students may edit their programs in Sean's <u>morning</u> office hours, and then have them re-tested for format and operation, but not design and style.   Students may edit their programs during Sean's afternoon office hours only if they have work or classes during ALL of Sean's morning office hours. Such program edits may only be done within three lectures of the date that program grades are e-mailed. During busy times, a student will only be allowed five minutes to edit their program.

- All work: Late work will **NOT** be accepted without an e-mail excuse from the Health Center. All work will be returned in lecture. All work not picked up in class will be available in my office during office hours. Requests for re-grades must be submitted within three lectures of the return of the work in class.

Exams:

Exams are cumulative, closed book, and closed notes. The final will be Monday, June 6th 6:00-8:00 in 1001 Giedt.

Discussion Sections: M 4:10-5 in 184 Young (Yingying), T 6:10-7 in 1 Wellman (Yingying), W 4:10-5 in 1 Wellman (Yangguang), 11-11:50 in 1204 Haring (Yangguang), F 2:10-3 in 1 Wellman (Yangguang). You are free to attend any of them, space permitting.

TENTATIVE CLASS OUTLINE

Dates	Topic	Reading
3/28	Intro, syllabus, UNIX intro, UNIX commands and utilities	Shotts: Ch. 1-4, 9 (chmod), 20 (cat, sort, diff).
3/30	UNIX utilities grep, find, tar	Shotts: Ch. 17-19.
4/1	UNIX shells, environment, quoting, redirection,	Shotts: Ch 6, 7, 11.
4/4	The Bash Shell, and Bash shell scripts	Shotts: Ch 24-29.
4/6	Shell scripts cont'd, sed, awk	Shotts: Ch. 20 (sed) http://www.grymoire.com/Unix/Awk.html
4/8	Processes, make	Shotts: Ch 10, 23.
4/11	C++ vs C	Lippman: Ch 1-6, 12.1.2, except 1.5, 2.6, 3.2-3.4, 5.6
4/13	C++ vs C cont'd	None.
4/15	Midterm #1, UNIX	None
4/18	Classes and data abstraction	Lippman: Ch 1.5, 7, 13.1-13.4
4/20	Classes and data abstraction cont'd	None.
4/22	C++ Stream input/output (last day to drop)	Lippman: Ch 8.1, 17.5.1, 17.5.2
4/25	File processing	Lippman: Ch 8.2, 17.5.3
4/27	Operator overloading	Lippman: Ch 14.
4/29	Operator overloading cont'd and linked lists	Linked list handout.
5/2	Linked lists cont'd.	None.
5/4	Inheritance	Lippman: Ch 15.1-15.7.
5/6	Virtual functions, and polymorphism	None.
5/9	Templates	Lippman: Ch 16.1 – 16.3.
5/11	Strings, string streams	Lippman: Ch 3.2, 8.3, 9.5
5/13	Standard Template Library (STL) intro, vector, iterators	Lippman: Ch 3.3, 3.4, 9.1 – 9.4
5/16	STL associative containers	Lippman: Ch 11.
5/18	STL generic algorithms	Lippman: Ch 10.
5/20	Midterm #2, UNIX, C++ through strings	None.
5/23	STL container adapters, stacks, and queues.	Lippman: Ch 9.6
5/25	STL priority_queue, recursion	Lippman: Ch 9.6
5/27	Exception handling and the preprocessor	Lippman: Ch 2.6.3, 5.6, 18.1.
6/1	Bitwise operators	Lippman: Ch 4.8
